

Pre-Press Equipment

This equipment is used in the printing industry to prepare materials before printing. It ensures high-quality output by preparing the materials.

Overview

Professional Pre-Press Solutions

This pre-press equipment set encompasses essential hardware components designed for high-precision printing workflows. The system integrates robust computing hardware with specialized printing peripherals to ensure reliable document and plate-making output. Ideal for industrial and office environments, these components are engineered to maintain consistent performance and high-quality results.

System Components

Included Hardware

- Hard Disk Drive (HDD)
- Central Processing Unit (CPU)
- Printed Circuit Boards (PCBs)
- Laser Printing Device

Device Type

Pre-Press, Printing Machinery, Office/Industrial

Technical Specifications

Component Features

Component	Function
HDD	Data Storage
CPU	Processing
PCB	Connectivity/Expansion
Printer	Document Output
