

Precision GPS Receiver with Tripod

This precision GPS receiver is designed for surveying, mapping, and navigation applications. It features a high-sensitivity receiver for accurate positioning and includes an adjustable tripod and carrying case.

Product Overview

Precision GPS Receiver with Tripod

This high-grade GPS receiver is designed for demanding professional applications in construction, agriculture, and environmental monitoring. Built to withstand harsh conditions, it features a rugged, waterproof, and dustproof construction with excellent performance in extreme temperatures. The system provides accurate solver output and strong signal interference resistance, ensuring reliable data collection in challenging environments.

Technical Features

Key Performance Metrics

0 Very Low

Failure Rate

Environmental Performance

- High temperature resistance
- Low temperature resistance
- Strong interference resistance

Durability

Waterproof, Dustproof, Rugged Design

System Components

Included Components

- Precision GPS receiver
- Adjustable tripod
- Carrying case
