

Precision Metal Stamping Components

These precision-engineered components are designed for metal stamping machinery. The set includes a spherical ball, a dome-shaped element, and a complex shaped part, all with highly polished surfaces.

Product Overview

Precision Stamping Components

These precision-engineered stamping components are designed for high-performance metal forming operations. Featuring a highly polished, durable metallic finish, these parts ensure consistent geometry and long-term reliability in industrial machinery. The set includes specialized tooling, such as dome-shaped die elements and complex forming punches, suitable for demanding manufacturing environments.

Technical Specifications

Included Components

- Spherical Bearing/Pivot
- Dome-shaped Die Element
- Complex Forming Punch

Primary Applications

Metal Forming • Precision Stamping • Industrial Machinery

Surface Treatment

Highly Polished, Reflective Finish, Corrosion Resistant
