

Precision Metal Stamping Washer

This is a stamping round washer designed for demanding applications. The washer features strategically placed slots, holes and cutouts to optimize performance and ensure durability.

Product Overview

Precision Stamping Component

This precision-engineered stamping round washer is designed for demanding mechanical applications requiring high durability and reliable performance. Featuring complex geometry with strategically placed slots, holes, and cutouts, the component is optimized to provide consistent support and alignment. Its robust construction ensures significant resistance to wear in high-stress operational environments.

Manufacturing Capabilities

Press Tonnage Capacity

160 T

Max Precision Press

200 T

Max Punching Press

80 T

Max High-Speed Press

Stamping & Forming Processes

Deep Drawing, Extruding, Piercing, Coining, Reverse Burring, Blanking, Forming, Embossing

Applications

Target Industry Applications

- Automotive Steering Systems
- Automobile Sensors
- Automotive Engines
- Lithium-ion Battery Housing
- Electronic Components
- Printer & Copier Assemblies
