

Precision Optical Microscope for Research and Quality Control

This precision optical instrument is designed for detailed observation and analysis. It features high-quality optics, a robust build, and integrated illumination for optimal viewing.

Product Overview

Professional Precision Optical Microscope

The XTL-IV is a precision optical instrument engineered for detailed observation and rigorous analysis. Designed with high-quality optics and a robust architecture, it ensures exceptional clarity for both research and industrial quality control tasks. Its ergonomic design and integrated illumination system provide a comfortable, reliable experience for long-term professional use.

Key Features

Primary Advantages

High-Quality Optics, Robust Construction, Ergonomic Design, Integrated Illumination

Application

Suitable Applications

- Scientific Research
- Quality Control Inspection
- Educational Training

Technical Specifications

Magnification Performance

1 Active

Adjustable Magnification System
