

Professional Echo Reverberation DSP Amplifier

This professional KTV amplifier features a new DSP design for echo and reverberation effects. It utilizes a YAMAHA chip and intelligent microcomputer control for musical tone sandhi and automatic reset.

Product Overview

Professional DSP Amplifier

This professional-grade KTV amplifier features an advanced DSP design powered by a leading YAMAHA chip and intelligent microcomputer control. It is engineered to deliver high-fidelity echo and reverberation effects, making it suitable for demanding audio environments. Designed with robust power output and multi-channel system capabilities, it provides essential tools for sound reinforcement and professional audio management.

Performance Metrics

Power Output (8 Ohm)

250 W

Power Output

Power Output (4 Ohm)

400 W

Power Output

Audio Processing

DSP Capabilities

- Advanced echo and reverberation effects
- Intelligent microcomputer control
- Adjustable echo and reverberation parameters
- Musical tone sandhi with automatic reset

Core Processor

YAMAHA DSP Chip

Control & Security

Control & Security Features

Volume limit setting, Password protection, Microphone feedback suppression

Microphone Feedback Prevention

Yes

System Configuration

System Type

Multi-channel
