

Professional Radio and TV Broadcasting System

This professional system is designed for radio and TV broadcasting. It incorporates advanced audio-visual technology, featuring a film projector mechanism and a large cabinet with control panels.

System Overview

Integrated Broadcasting Solution

This professional-grade broadcasting system is engineered for reliable radio and television applications. It features a robust architecture combining advanced audio-visual control interfaces with a high-performance film transport mechanism. Designed for continuous use, this system is an ideal solution for environments requiring precise control and consistent signal transmission.

Supported Broadcast Modes

Radio Broadcasting, TV Broadcasting, Analog Signal Processing

Technical Specifications

Control Interface Components

- Multi-button control console
- Analog signal meters
- Integrated projector mechanism
- Robust film transport system

Film Format

35MM

Performance Metrics

Operational Duty

Continuous Operation • Demanding Environments
