

Programmable Coaxial Cable Stripping Machine

This programmable coaxial cable stripping machine is designed for precision and efficiency. It features a user-friendly interface for setting stripping parameters, ensuring accurate and repeatable results.

Product Overview

Precision Coaxial Stripping

The ZDBX-39R is a programmable coaxial cable stripping machine engineered for maximum precision and operational efficiency. It features an intuitive interface that allows operators to set specific stripping parameters, ensuring consistent and repeatable results for high-volume production. Built with a focus on durability, this machine provides a reliable solution for clean cable preparation in the communication and electronics sectors.

Key Features

Operational Highlights

- Programmable interface for parameter customization
- High-precision stripping capability
- Robust construction for long-term reliability
- Suitable for diverse coaxial cable types
- Designed for high-volume industrial workflows

Industry Suitability

Applicable Industries

Communication, Electronics Manufacturing, Cable Assembly
