

PTC Heating Wind Machine

This PTC heating wind machine utilizes Positive Temperature Coefficient (PTC) heating elements for rapid warm-up and automatic temperature control. The unit features a compact design with multiple air vents for optimal air circulation.

Product Overview

Efficient PTC Heating Solution

This PTC heating wind machine is engineered for rapid warm-up and reliable performance. Utilizing advanced Positive Temperature Coefficient heating elements, the unit provides consistent warmth with automatic temperature control for enhanced safety. Its compact design and multi-vent architecture ensure optimal air circulation, making it an ideal choice for both home and office environments.

Technical Specifications

Recommended Use

- Home heating
- Office environments

Heating Element	Positive Temperature Coefficient (PTC)
Key Features	Rapid Warm-up, Automatic Temperature Control, Optimal Air Circulation, Compact Design
