

Pump/Vacuum System Component with Machined Metal Housing

This component is designed for use in pump or vacuum systems. It features a machined metal housing with multiple ports and channels for fluid or gas flow management.

Product Overview

Precision Engineered Housing

This high-precision component is designed for critical pump and vacuum system applications. Featuring a robust machined metal construction, it ensures durability and reliable performance in demanding industrial environments. The integrated sealing solution and multi-port design facilitate efficient fluid or gas flow management, making it an essential element for complex system integration.

Technical Specifications

Mounting Configuration

- Multiple bolt hole pattern
- Flange-style connectivity
- Integrated port channels

Material Type	Machined Metal
Sealing Method	Integrated O-ring seat

Application

Component Category

Industrial Hardware • Precision Component

Primary Application	Pump Systems, Vacuum Systems, Fluid Management, Gas Flow Control
