Product Overview

Professional PVA Polishing Solution

These advanced polishing wheels feature a specialized bond and open-cell structure designed to deliver a smooth, high-quality finish without burning the workpiece. With excellent elasticity and high fluid absorption, they are engineered for consistent performance across metals, plastics, and composites. The versatile design supports both dry and wet polishing applications, providing efficient debris removal for prolonged tool life.

Technical Specifications

Usage Modes

- Dry Polishing
- Wet Polishing (with oil/cooling fluid)

Tool Compatibility

- Rotary Tools
- Bench Grinders

Material

PVA Sponge

Application Compatibility

Metals, Plastics, Composites

Performance Features

Key Performance Indicators

1 High

Surface Finish Quality

1 Soft

Elasticity

1 Excellent

Loading Prevention
