

PVC Film Calendering Line

This calendering line is designed for producing rigid and semi-rigid PVC films. Its multiple rollers are arranged to ensure the desired thickness and surface finish.

Product Overview

High-Precision Calendering Solution

This advanced PVC Film Calendering Line is specifically engineered to manufacture rigid and semi-rigid PVC films. The system produces transparent, semi-transparent, and colored films with exceptional consistency and texture. Integrated printing and embossing modules allow for the creation of various decorative patterns, ensuring high-quality output suitable for professional-grade applications.

Production Capabilities

Process Features

- Integrated Automatic Printing
- Advanced Embossing Capability
- Precision Roller Configuration
- High-Volume Production Capacity

Compatible Film Types

Rigid PVC, Semi-rigid PVC, Transparent, Semi-transparent, Colored

Technical Construction

Construction Standards

Heavy-duty materials • High-stability design • Precision engineering

Control System

Integrated control panel with digital display for real-time monitoring and adjustment of calendering parameters.
