

PVC Floor Brick and Sheet Assembly Line

This assembly line is designed for the efficient production of PVC floor bricks, PVC sheets, and waterproof coiled materials. The system integrates multiple stages, from raw material processing to finished product output, ensuring high-quality and consistent results.

Overview

High-Efficiency PVC Production System

This advanced assembly line is engineered for the high-volume manufacturing of PVC floor bricks, PVC sheets, and high-polymer waterproof coiled materials. The system provides a seamless, integrated process from raw material intake to final product output, ensuring consistent quality and structural integrity. It is an ideal solution for large-scale industrial operations within the construction and building materials sectors.

Capabilities

Production Capabilities

PVC Floor Bricks, PVC Sheets, Waterproof Coiled Materials

Primary Industry

Construction and Building Materials

System Design

Process Workflow

- Raw material processing
- Forming and extrusion
- Material finishing
- Final output

Operational Scale

Large-scale Manufacturing • Industrial Grade
