

PVC Insulated Flexible Duct

This flexible duct is made of PVC fabric. It consists of three layers with insulation in the middle.

ADDITIONAL IMAGES

Product Overview

Professional Flexible Insulated Ducting

This PVC insulated flexible duct is engineered for efficient air supply and exhaust in demanding HVAC and industrial environments. Featuring a three-layer construction with a central insulation core, it provides excellent thermal performance and durability. The spiral steel wire reinforcement ensures flexibility and structural integrity, making it ideal for both permanent installations and temporary ground support applications.

Technical Specifications

Temperature Range

-20 °C

Minimum Temperature

80 °C

Maximum Temperature

Material Composition

Three-layer construction: PVC fabric (surface and bottom layers) with central insulation

Standard Sizes

100mm - 1500mm diameter

Standard Lengths

5m, 10m

Features & Connections

Connection Types

- End rope
- Zipper connection (on request)
- Velcro connection (on request)

Structural Support

Spiral steel wire reinforcement for self-supporting flexibility

Applications

Primary Applications

Air Conditioning Equipment • Aircraft Ground Support • Exhibition Centers • Theatres
