

PVC Window Door Welding Machine

This double-head welding machine is designed for welding PVC profiles in the production of window and door frames. It ensures precise welding with adjustable parameters and boasts a robust construction for industrial use.

Product Overview

High-Performance PVC Welding Solution

This double-head seamless welding machine is engineered specifically for the efficient fabrication of PVC window and door frames. It combines robust industrial construction with precise parameter controls, ensuring high-quality, consistent welds suitable for high-volume production environments. Designed to meet the demands of modern window manufacturing, it offers reliability and accuracy for professional-grade profile assembly.

Technical Specifications

Machine Configuration	Double Head
Primary Application	PVC Window Frames, PVC Door Frames
Welding Method	Seamless Welding

Key Features

Build Quality

Industrial Grade • Robust Construction

Operational Capabilities

- Precise welding control
- Adjustable welding parameters
- Suitable for high-volume production
