

Rack Mountable Uninterruptible Power Supply

This rack-mountable uninterruptible power supply (UPS) offers reliable backup power and surge protection. It ensures continuous operation for critical electronic equipment during various power disturbances, including outages.

Overview

High-Performance Power Protection

This rack-mountable uninterruptible power supply (UPS) provides mission-critical backup power for servers and networking equipment. Featuring pure sine wave online double-conversion technology, it ensures clean, stable energy even under the worst operating conditions. The versatile design allows for both rack and tower installations, making it an ideal solution for data centers and professional IT environments.

Key Features

Primary Capabilities

- 0ms transfer time
- Pure sine wave online double conversion
- IGBT technology integration
- Cold start functionality
- Automatic self-test routine

Technical Specifications

System Scalability

3 units

Parallel Redundancy

Operating Characteristics

Rack-tower convertible, Wide input voltage range, Low heat dissipation, Energy efficient design

Connectivity and Control

Control Interfaces

- User-friendly LCD control panel
- True RS-232 communication interface
- Optional SNMP adapter slot
- Optional SNMP network management card
