

Radial Arm Drilling Machine

The radial arm drilling machine is a versatile machine tool for drilling holes in large and heavy workpieces. Its radial arm can be swiveled to position the drill head over the desired drilling location.

Product Overview

Precision Radial Drilling

The Radial Drilling Machine features an elaborately designed construction that combines perfect appearance with convenient maintenance. It is engineered to provide ample rigidity and power, supporting diverse operations including drilling, counter boring, spot facing, reaming, tapping, and specialized boring. This machine is an essential tool for machining small to medium-sized workpieces across various industrial departments.

Technical Specifications

Key Performance Features

- Wide speed range
- Variable feed range
- Compact operation interface
- High structural rigidity
- Reliable power delivery

Model ID	Z3032X10
Clamping Method	Manual clamping for head stock, radial ram, and columns

Application

Suitable Industries	Metalworking, General Machining, Industrial Manufacturing
