

Radial Drilling Machine

This heavy-duty radial drilling machine is designed for precision drilling in metalworking and manufacturing. The radial arm allows versatile positioning of the drilling head over a large work area.

Overview

Heavy-Duty Radial Drilling Machine

This heavy-duty radial drilling machine is engineered for precision drilling operations in demanding metalworking and manufacturing environments. Featuring a robust construction with a vertical column, radial arm, and versatile drilling head, it allows for efficient positioning over a large work area. It is perfectly suited for a variety of tasks including drilling, reaming, tapping, and spot-facing, ensuring stability and vibration dampening during heavy operation.

Technical Specifications

Construction Features

- Robust vertical column
- Adjustable radial arm
- Variable speed control
- Sturdy base for vibration dampening

Model Number	Z3132M
Primary Applications	Drilling, Reaming, Tapping, Spot-facing
