

Radiant Space Warmer with Finned Heating Element

This radiant space warmer is designed for efficient space heating. It features a finned heating element for optimal heat dissipation and includes a control panel for easy operation.

Product Overview

Efficient Radiant Heating Solution

The Radiant Space Warmer is a high-performance heating appliance engineered for effective indoor climate control. Utilizing a specialized finned heating element, it maximizes surface area to ensure rapid and consistent heat dissipation throughout the room. Designed for reliability and ease of use, this portable unit features an intuitive control panel and a stable base, making it an ideal choice for professional indoor spaces.

Technical Specifications

Model Number	YC-24CFT
Heating Technology	Finned Heating Element
Application	Indoor, Space Heating, Portable

Features

Key Design Elements

- Finned element for efficient heat dissipation
- Integrated control panel for precise operation
- Sturdy support feet for maximum stability
- Portable, self-contained design
