

Radio Communication Tester

This universal radio communication tester is designed for comprehensive testing of wireless communication devices and systems. It is a versatile tool for research, development, and production testing in the field of radio communications.

Overview

Universal Radio Communication Tester

This universal radio communication tester is designed for comprehensive testing of wireless communication devices and systems. It serves as a versatile tool suitable for research, development, and production testing environments in the field of radio communications. The unit combines precise signal input and output capabilities with intuitive user controls to ensure efficient and accurate testing workflows.

Identification

Model Number	LRU200
Part Number	1300.0008.02

Technical Interfaces

Connectivity Ports

- VGA Interface
- Optical Interface
- RF Connectors

Control Interface	Keypad, Rotary Controls
-------------------	-------------------------

Display and Design

Display	Large integrated display
---------	--------------------------
