

Railway Gondola Car for Bulk Materials

This railway gondola car is designed for transporting bulk materials. It features a robust steel construction, open-top design, and compatibility with standard rail infrastructure.

Overview

Industrial Bulk Transportation

This railway gondola car is engineered specifically for the efficient transport of heavy bulk materials such as coal, gravel, and ore. Featuring a durable open-top steel construction, it facilitates rapid loading and unloading operations. The unit is fully compatible with standard global rail infrastructure and includes integrated safety access ladders for operational maintenance.

Technical Specifications

Model Identifier	K13XK
Serial Number	5508603

Key Features

Construction Details

- Robust heavy-duty steel body
- Open-top design for vertical loading
- Integrated maintenance ladder
- Standard rail coupling interface

Application Areas	Bulk Material Handling, Coal Transport, Mining Ore Logistics, Construction Materials
