Product Overview

Comprehensive Railway Rolling Stock Solutions

This range of railway rolling stock includes both high-efficiency passenger transport vehicles and durable freight cars engineered for diverse transit requirements. Beyond the complete units, the system supports comprehensive maintenance and development with essential locomotive accessories and specialized infrastructure components. Built for robust performance in rail transit projects, these solutions ensure operational reliability and logistical excellence across railway networks.

Technical Specifications

Available Components

- Dynamic systems
- Braking systems
- Travel components
- Vehicle electric appliances
- Rail construction materials
- Fasteners
- Concrete beams

Product Standards

Rail Transit Engineering, Standard Gauge, Freight & Passenger Capable

Braking Equipment

Air Brake
