

Railway Tank Car for Liquid Transport

This cylindrical tank car is designed for transporting liquids or gases via railway. It is mounted on a rail car chassis and includes a ladder for accessing the top of the tank.

Product Overview

Industrial Liquid Transport Solution

This heavy-duty railway tank car is precision-engineered for the secure transport of bulk liquids and gases. Featuring a robust cylindrical design mounted on a standard rail chassis, it ensures structural integrity and safety during long-haul transit. The unit includes integrated access ladders and clear identification markings to facilitate efficient logistics and maintenance operations.

Technical Specifications

Model Identification	G70K
Unit Identifier	10546
Internal Serial Number	6283052

Operational Features

Accessibility

- Integrated top-access ladder
- Maintenance platform
- External identification markings

Transport Capacity	Liquid Bulk, Pressurized Gas, Railway Logistics
