

Range Hood Plastic Component

This is a plastic component designed for use in range hoods. The durable plastic part provides structural support and assists in airflow management.

Product Overview

Professional Ventilation Components

These black plastic components are engineered for integration into professional kitchen ventilation and range hood systems. Designed for durability and performance, these parts facilitate efficient air extraction and stable internal support within the ventilation assembly. Their precise construction ensures reliable operation and seamless installation for high-demand kitchen environments.

Technical Specifications

Design Features

- Dual circular inlets
- Integrated support structures
- Central duct connection
- Airflow management geometry

Material	Heat-resistant plastic, Durable polymer
Primary Application	Kitchen ventilation systems
