

Rearview Mirror Parking Sensor System

Parking sensor system integrates into a rearview mirror for enhanced safety. It uses ultrasonic sensors and a digital display to provide visual and audible alerts when obstacles are detected.

Product Overview

Advanced Parking Assistance

This rearview mirror parking sensor system is designed to enhance driver safety and precision during parking maneuvers. The integrated digital display provides real-time distance feedback, while the ultrasonic sensor array ensures comprehensive obstacle detection behind the vehicle. It is a reliable solution for minimizing blind spots and preventing minor collisions in tight spaces.

System Components

Included Components

- Integrated rearview mirror with digital display
- Control box unit
- Ultrasonic sensor array

Key Features

Audible Alerts, Visual Distance Display, Obstacle Detection, Ultrasonic Sensing
