

Rebar Bending Machine for Construction

This heavy-duty rebar bender is designed for construction and metalworking. It provides precise and efficient bending of reinforcing bars for accurate shaping and fabrication of metal components.

Product Overview

Heavy-Duty Rebar Bending Solution

This heavy-duty rebar bender is engineered for demanding construction and metalworking applications. It provides precise and efficient bending of reinforcing bars, facilitating accurate shaping and fabrication of metal components. Built with robust construction, this machine ensures durability and reliability in challenging work environments, making it an ideal choice for construction sites, fabrication shops, and industrial settings.

Technical Specifications

Model	RB-25
Max Rebar Diameter (Mild Steel)	25 mm
Bending Angle	Adjustable

Power and Performance

Key Performance Metrics

25 mm

Max Capacity

Logistics and Handling

Weight Specifications

Type	Weight
Net Weight	Refer to manual
Gross Weight	Refer to manual

Packing Information	Standard industrial packaging
