

Rebar Straightening Machine

800KN-10000KN

This machine enhances efficiency through servo and transmission technology. It achieves a straightening precision of up to 0.01mm with an advanced control system and user-friendly interface.

Overview

High-Precision Rebar Straightening

The JEC80S series rebar straightening machine is engineered for high-performance, high-reliability, and high-precision automation in industrial construction applications. Designed to handle a wide range of rebar sizes and grades, this equipment ensures consistent and accurate straightening to improve overall project quality. Featuring a rigid frame construction and a powerful hydraulic system, it offers robust performance for demanding environments.

Technical Specifications

Force Range

800 KN

Minimum Force

10000 KN

Maximum Force

Key Features

- Rigid frame construction
- Hydraulic power system
- Adjustable straightening rollers
- User-friendly control panel

Application Suitability

Industrial Construction, Rebar Processing, High-Precision Straightening
