

Red Plastic Audio-Video Component Rim

This red plastic rim component features a cylindrical shape with a protruding tab. It is likely used in audio-video products to provide structural support and connection points.

Product Overview

Professional AV Component Rim

This red plastic rim is a precision-engineered structural component designed specifically for audio-video hardware applications. Featuring a cylindrical architecture with a dedicated peripheral mounting tab, it provides critical support and integration for internal electronic assembly. Its durable construction ensures stable placement of internal components, facilitating reliable connectivity and system integrity within professional AV units.

Technical Specifications

Key Features

- Cylindrical housing structure
- Integrated mounting tab
- Central assembly orifice
- Peripheral connection apertures

Model ID	POT42/POT4019BASE
Material	Engineering Plastic
