

Reed Mat Knitting Machine for Mattress Production

The reed mat knitting machine automates the production of reed mats. It is mainly applied in the production of reed mats and mattresses.

Product Overview

High-Efficiency Mat Knitting Solution

This automated knitting machine is designed for the high-speed production of reed mats, mattresses, and various agricultural mats. Combining compression, knitting, drawing, and cutting into a single efficient pass, the system is engineered for reliable, energy-conserving operation. It provides an economical and labor-saving solution for manufacturing eco-friendly bedding and construction materials.

Performance Metrics

Production Efficiency

60 m/h

Maximum Production Rate

Technical Features

Integrated System Components

- Knitting device
- Output mechanism
- Cutting device
- Feed system
- Power supply system

Key Operational Advantages

Energy Conserving, Labor Saving, Reliable Performance, Simple Operation, Multi-purpose

Application Suitability

Supported Mat Types

Reed Mats • Mattresses • Grass Mats • Cattail Mats
