

Refrigerant Recovery Unit VPR-1A, Single Cylinder

This single-cylinder refrigerant recovery unit is designed for efficient and reliable operation with low noise and environmental protection. It is popular in refrigeration, medicine, chemical, election, and metallurgy industries.

Product Overview

Professional Refrigerant Recovery Unit

The VPR-1A is a high-performance single-cylinder refrigerant recovery unit engineered for HVAC&R service tasks. Designed for reliability and efficiency, it features a robust 1/2HP motor and supports multiple refrigerant categories. With integrated monitoring controls and user-friendly operation switches, it ensures safe and compliant recovery processes for professional environments.

Technical Specifications

Motor Power	0.5 HP
Power Input	220-240V 50-60Hz
Compatible Refrigerant Categories	Category III, Category IV, Category V

Control & Monitoring

Integrated Controls

- Recovery Mode
- Purge Mode
- Start/Stop Switch
- Power Switch
- LP Cutoff Monitoring
- HP Cutoff Monitoring

Safety Systems

Circuit Breaker • High Pressure Cutoff • Low Pressure Cutoff
