

Refrigerant Recovery Unit with Single Cylinder

This single cylinder recovery unit is designed for efficient and reliable refrigerant recovery. It features a robust construction for durability and long life in demanding HVAC&R applications.

Product Overview

Professional Refrigerant Recovery Unit

This high-performance single cylinder recovery unit is engineered for efficient and reliable refrigerant handling in demanding HVAC&R environments. Featuring a robust, oil-less air-cooled design, it ensures long-term durability and consistent performance. The unit is equipped with intuitive controls and integrated pressure monitoring, making it an essential tool for technicians requiring compliance with environmental standards and maximum field productivity.
