

Residential Water Softener System

This water softener system is designed for residential use. It reduces water hardness by removing minerals such as calcium and magnesium.

Product Overview

High-Efficiency Water Softening

This residential water softener system is engineered to effectively reduce water hardness by removing excess mineral content, specifically calcium and magnesium. It utilizes a sophisticated ion exchange process within a dedicated resin tank to ensure softer, higher-quality water throughout the home. The system is designed for ease of use, featuring an integrated control panel for seamless programming and monitoring of the softening cycles.

Technical Specifications

Core Components

- Resin tank for ion exchange
- Brine tank for salt storage
- Programmable digital control panel

Usage Environment

Residential

Minerals Removed

Calcium, Magnesium
