

Residential Wind Turbine Generator

This wind generator is designed for residential or light commercial use. It converts kinetic energy from the wind into electrical energy, providing a sustainable power solution.

Product Overview

Sustainable Wind Energy Solution

This residential wind turbine generator is designed to efficiently convert kinetic wind energy into clean electrical power. Featuring a high-performance three-blade rotor system with specialized tip accents, it provides a reliable sustainable energy source for homes or light commercial properties. The integrated tail fin ensures precise wind direction tracking to maximize output in varying environmental conditions.

Technical Specifications

Primary Applications

Residential • Light Commercial

Design Features

Three-blade rotor, Tail fin tracking, Elevated pole mounting

Functionality

Kinetic to electrical energy conversion
