

Residential/Commercial Cooling and Air Circulation System

This system provides efficient cooling and air circulation for residential or commercial applications. The system features an outdoor unit housing the compressor and condenser, and an indoor unit with a cooling coil and air distribution system.

Product Overview

High-Efficiency Cooling and Ventilation

This versatile system is engineered to provide reliable cooling and consistent air circulation for both residential and commercial environments. It features a robust outdoor compressor and condenser unit paired with an indoor air handling unit, connected by high-performance refrigerant lines. Designed for optimal climate control, it ensures efficient energy use and effective air distribution in various indoor settings.

Core Components

System Configuration

- Outdoor compressor and condenser unit
- Indoor air handling unit
- Refrigerant line connectivity

Key Features

Efficient Cooling • Air Circulation • Dual-Use Design

Suitable Applications

Residential, Commercial
