Product Overview

High-Efficiency Reverse Osmosis System

The RO-185(B/D) reverse osmosis water purifier is designed to deliver safe, clean drinking water by effectively removing contaminants through a multi-stage filtration process. With a precise filtration capability of 0.0001 μ m and an outflow rate of 185 liters per day, this system provides a reliable solution for household water purification needs. Its compact, integrated design includes a 3-gallon storage tank to ensure you always have access to high-quality purified water.

Technical Specifications

Filtration System	PP, GAC, CTO, RO, Post-AC
Filter Precision	0.0001 μ m

Performance

Key Performance Metrics

185 L/24h

Outflow Rate

3 Gallons

Tank Capacity

25 W

Rated Power

Operating Requirements

Working Pressure	0.1-0.5 Mpa
Water Temperature	5-38
Power Supply	AC220V/50Hz

Logistics

Container Loading

Container Type	Quantity
20'GP	280 PCS
40'HQ	714 PCS

Physical Dimensions

386x197x464 mm
