Product Overview

Precision Engineered Suspension Control

This right-hand control arm is a critical automotive suspension component designed to connect the vehicle chassis to the wheel hub. Constructed from robust metal, it features an A-arm geometry that ensures stability and controlled articulation of the suspension system. It is engineered to maintain precise wheel alignment, enhancing both vehicle handling and ride comfort.

Technical Details

Integrated Components

- Chassis mounting bushings
- Ball joint connection

Position	Right Hand (RH)
Material Composition	Metal (Steel/Aluminum Alloy)
Design Type	Triangular / A-Arm
