

RJ Modular Connectors

Modular connectors, also known as RJ connectors, are electrical connectors used in networking and telecommunications for data transfer. Shielded connectors are used in environments with high electromagnetic interference (EMI) to ensure signal integrity, while unshielded connectors are suitable for general-purpose applications.

Product Overview

Professional Modular Connectors

These RJ modular connectors are designed for reliable telecommunications, networking, and data transfer applications. Featuring gold-plated contacts to ensure low resistance and corrosion resistance, they are engineered for easy crimping and termination. The transparent housing allows for quick visual inspection of wire placement, ensuring consistent quality in every connection.

Technical Specifications

Available Models

Model ID	Type
KFT701	Unshielded Crystal Head
KFT701-B	Shielded Crystal Head

Key Features

- Gold-plated contacts
- Low contact resistance
- Corrosion resistant
- Transparent housing for visual inspection
- Compatible with standard crimping tools

Shielding Features

Unshielded, Shielded (Metal Casing)
