

RJ45 Communication Cable Connector

RJ45 connectors are used for terminating communication cables. They have gold-plated contacts providing optimal signal transmission and corrosion resistance.

Product Overview

Professional Networking Connectivity

These RJ45 connectors are engineered for high-performance termination of communication cables, ensuring reliable data and voice transmission. Featuring gold-plated contacts, they provide superior corrosion resistance and optimal signal integrity for demanding networking environments. The transparent housing design facilitates quick and accurate wire sequence verification, streamlining the installation process for professional technicians.

Technical Specifications

Housing Features

Transparent • Corrosion Resistant

Primary Applications

- Data transmission
- Voice transmission
- Network infrastructure

Connector Type	RJ45
Compatible Cable Types	Cat5e, Cat6, Solid, Stranded
Contact Material	Gold-plated
