

Road Sweeper

This road sweeper is designed to remove solid debris, such as cement and soil, from road and bridge surfaces. It can also be used on functional and milled surfaces.

Overview

Heavy-Duty Road Sweeper

The GYQS1500D road sweeper is a heavy-duty cleaning machine engineered for the efficient maintenance of roads and large industrial surfaces. Built for durability and reliability, it features a robust construction capable of withstanding demanding environments. The advanced brush system ensures thorough removal of debris and dust, while the intuitive design promotes ease of operation and maintenance for professional users.
