

Roofing Sheet Bending Machine

This roofing sheet bending machine is designed for the precision forming of roofing sheets. It features robust construction and ensures accurate and consistent bending for high-volume production.

ADDITIONAL IMAGES

Overview

Industrial Roofing Sheet Forming Solution

This high-performance tile forming machine is engineered for precision and efficiency in metal roofing production. Designed for industrial applications, it offers robust construction and consistent performance, ensuring accurate bending and shaping of colored steel sheets. With a production capacity of 6-8 meters per minute, it is an ideal solution for high-volume manufacturing environments.

Technical Specifications

| | |
|---------------------|---------------|
| Production Capacity | 7 m/min |
| Power Rating | 5.5 kw |
| Voltage System | 380V, 3 phase |

Physical Dimensions

| | |
|------------------------|-----------------------|
| Dimensions (L x W x H) | 6600 x 1400 x 1300 mm |
| Total Weight | 3 tons |

Operational Details

| | |
|---------------|---------------|
| Condition | New |
| Tile Type | Colored Steel |
| Machine Color | Green |

Compliance & Support

| | |
|----------------------|--|
| Certifications | BV |
| Warranty | 12 Months |
| Service Availability | Engineers available for overseas service |

Performance Metrics

Key Performance Features

- High-quality output
- Smooth operation
- Reasonable structural design
- Steady performance
