

Rotary Arm Pallet Wrapping Machine

This rotary arm wrapping machine is designed for efficient pallet wrapping. It uses stretch film to ensure stability of products during transit and storage.

Overview

High-Efficiency Rotary Arm Wrapping

This rotary arm pallet wrapping machine is engineered for secure and efficient pallet stabilization during transit and storage. Designed for high-volume industrial environments, it features a rotating arm mechanism that applies stretch film with precision. The system offers adjustable settings for both film tension and wrapping speed, allowing for fully customized packaging solutions tailored to specific load requirements.

Key Features

Performance Metrics

1 Rotary Arm

Wrapping Mechanism

100 %

Adjustability

Operational Capabilities

- Adjustable film tension
- Variable wrapping speed
- High-volume throughput capacity
- Enhanced pallet stability
