

Rotary Rice Grader

This rotary rice grader efficiently separates rice grains based on size and quality. Its automated operation and durable construction ensure high throughput and consistent grading results.

Product Overview

Rotary Rice Grader

This rotary rice grading machine is engineered for the precise and efficient separation of rice grains based on size and quality. Designed for high-performance rice processing environments, it features a robust construction and automated operation to ensure consistent grading results. The system supports continuous feeding via an integrated hopper, helping food and beverage facilities achieve high throughput while maintaining equipment durability.

Technical Specifications

Performance Features

- Robust frame construction for longevity
- Automated operation sequence
- High-throughput design
- Integrated feeding hopper

Processing Capability

Grain size separation, Quality sorting, Continuous feeding

Application & Maintenance

Suitable Industries

Rice Processing • Food & Beverage

Maintenance Requirements

Minimal maintenance design for long-lasting performance
