

Rotary Tiller for Soil Preparation

This rotary tiller is designed for agricultural use, featuring a robust construction for soil preparation. The implement is equipped with multiple tilling blades and a three-point hitch system for tractor attachment.

Overview

Professional Soil Preparation Solution

This rotary tiller is engineered for efficient soil preparation in diverse agricultural environments. Featuring a robust construction, it is equipped with high-performance tilling blades and a reliable three-point hitch system for seamless tractor attachment. Designed for versatility, this implement effectively handles various soil types and tillage requirements, making it an essential tool for modern farming operations.

Technical Specifications

Key Features

- Robust heavy-duty frame
- Multi-blade tilling assembly
- Versatile soil type compatibility

Model Designation	FM-140
Tillage Capability	Wet Field, Dry Field
Attachment System	Three-point hitch
