

Rotary Tiller for Soil Preparation

This product is agricultural machinery used for hard work and site preparation. It is mainly used for rotary operations in dry land and paddy fields.

Product Overview

High-Efficiency Rotary Tiller for Versatile Soil Preparation

This powerful, all-gear drive rotary tiller is engineered for demanding agricultural tasks in both dry land and paddy fields. Featuring a compact, durable ductile iron gearbox, the machine ensures high intensity and a long service life under varied soil conditions. Its multi-functional design allows for easy shifting and integration with additional equipment for tasks such as pumping, spraying, trenching, and transport.

Technical Specifications

Tillage Width	1350 mm
Tillage Depth	100 mm
Machine Weight	132 kg

Performance

Productivity

50 ha/h

Productivity

Features & Compatibility

Secondary Operations

- Pumping
- Power Generation
- Spraying
- Trenching
- Short-distance Transport

Common Applications

Dry Land, Paddy Field, Orchards, Vegetable Gardens, Tea Plantations, Tobacco Areas

Construction

Drive System	All-gear drive
Clutch System	Wet friction plate clutch
Gearbox Material	Ductile iron
