

Rubber Block Cutting Machine with Rotary Disc

This rotating-disc type cutting machine is designed for processing natural, reclaimed, compound, and synthetic rubber. It cuts rubber blocks into slices, granules, bars, and smaller blocks, and can also process other materials.

ADDITIONAL IMAGES

Overview

The horizontal hydraulic cutting machine utilizes a rotating blade for precise material processing.

High-Efficiency Rubber Cutting Solution

This rotating-disc cutting machine is designed for the efficient processing of natural, compound, reclaimed, and synthetic rubber. It features a robust hydraulic system and a reciprocating worktable to deliver clean, precise cuts into blocks, slices, granules, or bars. Engineered for durability and high performance, this equipment helps optimize material usage and increase production efficiency in industrial rubber processing environments.

Technical Specifications

Technical Specifications

Feature	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Rotational Speed	50r/min	50r/min
Power	4+2.2kw	4+2.2kw
Working Pressure	5Mpa	5Mpa
Production Capacity	2t/h	3t/h

Key Features

Detailed view of the cutting guide plate, worktable, and control box components.

Operational Design

- Rotating-disc cutting mechanism
- Reciprocating worktable motion
- Hydraulic system operation
- Self-lubricating moving parts

Cutting Capabilities

Blocks, Slices, Granules, Bars

Compatible Materials

Natural Rubber, Compound Rubber, Reclaimed Rubber, Synthetic Rubber
