

Sand Washing Machine for Aggregate Processing

This sand washer features simple construction, convenient maintenance, and no pollution. It is durable and can save water.

ADDITIONAL IMAGES

Product Overview

High Efficiency Sand Washing Machine

This high-efficiency sand washer is an essential solution for wet-processed sand production, designed to effectively remove stone powder and impurities from mixed sand. It provides superior cleaning, classification, and dehydration capabilities, significantly improving the final quality of aggregate materials. Engineered for durability and reliability, the machine features a simple, low-maintenance design that ensures consistent performance across demanding industrial and construction environments.

Operational Capabilities

Suitable Industries

- Construction Sites
- Sand Plants
- Mining Operations
- Glassworks
- Hydropower Stations
- Concrete Mixing Stations

Core Functions

Sand Washing, Material Separation, Impurity Removal, Dehydration

Design & Construction

Washing Mechanism

Rotating wheel with buckets

Drive System

Belt-driven electric motor

Performance Highlights

Performance Benefits

High Efficiency • Water Saving • No Pollution • Easy Maintenance
