

Satellite Communication Equipment

This satellite communication equipment is designed for reliable and secure data transmission. It features multiple indicator lights for monitoring status, a robust enclosure for durability, and a user interface for easy operation.

Overview

Satellite Communication Terminal

This satellite communication equipment is engineered for high-reliability and secure data transmission in challenging environments. It is specifically designed for use in remote locations and critical infrastructure applications where traditional connectivity may fail. The terminal incorporates an intuitive user interface and clear status monitoring indicators to ensure ease of operation for professional users.

Technical Specifications

Design & Build

Robust Enclosure • Remote-Ready

Supported Networks

BDS-B2-S, BeiDou Satellite System

Operational Features

Status Indicators

- Multiple visual status indicators
- Integrated user interface
