

Scaffolding Transom

This horizontal structural component is essential for scaffolding systems. Typically made of steel, it provides support for scaffolding boards to create a safe working platform.

Product Overview

Kwikstage Transom

The Kwikstage transom is a critical horizontal structural component designed for scaffolding systems. Crafted from robust steel, it provides essential support for scaffolding boards, ensuring a stable and safe working platform for construction projects. These transoms connect seamlessly to vertical standards, facilitating quick and efficient assembly and disassembly to enhance site productivity.

Technical Specifications

Component Type	Horizontal Scaffolding Member
Material	Steel
System Compatibility	Kwikstage System

Key Features

Assembly Features

- Quick and easy assembly
- Rapid disassembly
- Rigid frame formation
- Supports scaffolding boards
