

Seawater Ice Production Unit

This electronic device is designed to produce ice from seawater. It features a robust control panel and durable cabinet, making it ideal for marine environments.

Product Overview

Marine-Grade Ice Production

The Seawater Ice Production Unit is a specialized electronic device engineered specifically for generating ice directly from seawater. Designed for durability in harsh marine environments, it features a robust cabinet and an intuitive control panel with multiple indicators for efficient operation. This system provides a sustainable and reliable ice source, making it an essential solution for fisheries, marine research, and other maritime applications.

Technical Specifications

Intellectual Property Status

National Intellectual Property Protected

Model	HBJ4.0
Primary Applications	Fisheries, Marine Research, Maritime Operations

Operational Features

Control System	Integrated control panel with multiple operation indicators
Housing	Durable cabinet for marine environments
