

Segmented Diamond Cup Wheel

This is a single row segmented diamond grinding cup wheel. It is designed for efficient material removal and surface preparation on concrete, stone, and masonry.

Product Overview

Professional Segmented Diamond Cup Wheel

This professional-grade segmented diamond cup wheel is engineered for rapid stock removal on demanding surfaces including concrete, granite, and various building materials. Designed for compatibility with standard angle grinders, it provides a robust solution for surface leveling and coating removal. The specialized segmented design ensures efficient grinding performance and superior dust extraction for consistent professional results.

Applications

Primary Applications

Concrete Grinding, Granite Finishing, Building Materials, Coating Removal, Surface Leveling

Technical Specifications

Compatibility and Design

- Designed for professional use
- Compatible with angle grinders
- Available with threaded arbor
- Available with non-threaded arbor

Grade

Professional
